2009 Round Lake Property Owners Association Petition Concerning Round & Little Round Lakes in Sawyer County Wisconsin

1. The undersigned are in support of continued "active" management of Round & Little Round Lake water level in Sawyer County Wisconsin. This means maintaining, augmenting or replacing The Carlson Road Dam which is the primary water level control structure and to use same to manage water level at 1344.75 feet to 1345 feet or local datum equivalent 77.0 to 77.25 feet.

2. We are also in support of modifying but not vacating the 1941 PSC (Public Service Commission) Order that is the current legal mandate controlling water levels on Round & Little Round Lakes in Sawyer County so as to reduce Sawyer County management liability. Under no situation do we want the 1941 PSC Order governing Round & Little Round Lakes vacated unless there is a simultaneous and immediate modification of the order to reflect continuing active management and preservation of Carlson Dam as noted in #1 above.
